

The award-winning **Advanced Broadband Enabled Learning (ABEL)** program strives to improve results through its professional learning program and its virtual community for sharing knowledge and collaboration. Through both public and private sector partnerships and a research-based approach, ABEL integrates new and existing information communication technologies (ICT) in teaching and learning. The combination of its networks, partnerships and a focus on research, results in innovative models for teaching and learning that drive institutional transformation and create new opportunities.

Founded in 2002, the ABEL program is a unique research and innovation program led and funded by York University and the York Region District School Board (YRDSB). Since its inception, the ABEL program has been working with educators in classrooms across Canada. The program has established national and international credibility as a leading authority in new modes of learning into classrooms. These services are flexible and can be customized to complement ongoing initiatives at partner institutions and businesses.
