

The Advanced Broadband Enabled Learning (ABEL) has developed new technological and pedagogical knowledge and practice that is aligned with today's learning needs. It provides the participants with access to a web-based learning platform, a professional learning program, implementation strategies and a research and evaluation component. These services are flexible and can be customized to complement ongoing initiatives at participating institutions and businesses.

These services and costs may be modified based on client or partner requirements. ABEL will meet the needs of their partners and collaborators by customizing service to meet specific goals of program delivery and access.
