

Supernovae, neutron stars and black holes PHYS 6210 1.0

Project

Due: Monday, 5 December 2016, 3:00 pm

1. Write a report on a subject of your choice of supernovae, neutron stars and black holes. The report should be single-spaced. Please use as font “Times New Roman.” Start with a title, your name and an Abstract, about 5 to 10 lines long which summarizes your report. Use size 10 for the abstract. Continue with the body of your report in the Introduction and Science sections. Use size 12 for the introduction and thereafter. Include figures, tables and equations if needed. The figures should have numbers (e.g. Figure 1, Figure 2...), figure captions about one to two sentences long, and the figures should be referred to in the body of the report. The same goes for Tables. Consult the websites. Give a half-page Conclusions or Summary section at the end. Give references at the end of your report in a References section and make sure that you refer to the references in the body of your report. You can take the Schmidt et al. (1992) paper for guidance as to how to write a scientific report. The total length of the document should be about 10 pages.
