MATERIAL SAFETY DATA SHEET

Syngenta Crop Protection Canada, Inc.
140 Research Lane, Research Park
Guelph, ON N1G 4Z3

Date of MSDS Preparation (Y/M/D): 2005-12-31

MSDS prepared by:
Department of Regulatory & Biology Development
Syngenta Crop Protection Canada, Inc

In Case of Emergency, Call 1-800-327-8633 (FAST MED)
Supersedes date (Y/M/D): 2005-09-01

For further information contact:
1-87-SYNGENTA (1-877-964-3682)

SECTION 1: PRODUCT IDENTIFICATION

Product Identifier: DEMAND® CS Insecticide
Registration Number: 27425 (Pest Control Products Act)
Chemical Class: Synthetic pyrethroid
Synonym: Not applicable

Active Ingredient (%): Lambda-Cyhalothrin Technical (9.7 %)
Chemical Name: [1α(S*),3α(Z)]-cyano(3-phenoxypyphenyl)methyl-3-(2-chloro-3,3,3-trifluoro-1-propenyl)-2,2-dimethylcyclopropanecarboxylate

Product Use: For control of insects on labelled crops. For further details please refer to product label.

SECTION 2: COMPOSITION/INFORMATION ON INGREDIENTS

† Material listed in Ingredient Disclosure List under Hazardous Products Act.

Ingredients not precisely identified are proprietary or non-hazardous. Values are not product specifications.
SECTION 3. HAZARD IDENTIFICATION

Symptoms of Acute Exposure
May cause eye and skin irritation. Harmful if swallowed. Allergic skin reactions are possible. Exposure to high vapour levels may cause headaches, dizziness, numbness, nausea, incoordination, or other central nervous system effects. May cause temporary itching, tingling, burning or numbness of exposed skin, called paresthesia.

Hazardous Decomposition Products
Can decompose at high temperatures and form toxic gases.

Physical Properties
Appearance: Off-white liquid.
Odour: Slight odour/typical aromatic solvent.

Unusual Fire, Explosion and Reactivity Hazards
During a fire, irritating and possibly toxic gases may be generated by thermal decomposition or combustion.

Potential Health Effects
Relevant routes of exposure:
Skin, eyes, mouth, lungs. Toxic if inhaled, in contact with skin and/or if swallowed. Causes eye, skin and respiratory passage irritation. May cause sensitization by skin contact.

Adverse health effects from exposure to product or ingredients of product:
GENERAL INFORMATION:
Pyrethroids may produce non-specific symptoms such as nausea, vomiting, abdominal pain and diarrhea. Large doses may cause disturbance of the nervous system with tremors, ataxia, weakness of limbs, convulsions, coma, and death from respiratory depression. Dermal contact with pyrethroids in the facial area may cause a subjective sensation of tingling or numbness (paresthesia). There is no evidence of any long-term or cumulative effects on the skin. Aromatic hydrocarbons cause bone marrow depression and increase the fragility of red blood cells. Sensitization of the heart muscle can occur, but it is very rare. Sensitization is the process whereby a biological change occurs in the individual because of previous exposure to a substance and, as a result, the individual reacts more strongly when subsequently exposed to the substance. Once sensitized, an individual can react to extremely low airborne levels, even below the TLV, or to skin contact. Peripheral neuropathy is a progressive disorder of the nervous system characterized by sensory and motor abnormalities, muscle spasms, weaknesses and pain in the arm and legs, numbness and tingling of the fingers and toes and paralysis.

SECTION 4. FIRST AID MEASURES

IF POISONING IS SUSPECTED, immediately contact the poison information centre, doctor or nearest hospital. Have the product container, label or Material Safety Data Sheet with you when calling Syngenta, a poison control center or doctor, or going for treatment. Tell the person contacted the complete product name, and the type and amount of exposure. Describe any symptoms and follow the advice given. Call the Syngenta Emergency Line [1-800-327-8633 (1-800-FASTMED)], for further information.

EYE CONTACT: Immediately flush eyes with clean water, holding eyelids apart for a minimum of 20 minutes. Remove contact lenses, if present, after 5 minutes, then continue rinsing eye. Call Syngenta, a poison control center or doctor for treatment advice. Obtain medical attention immediately if irritation persists.

SKIN CONTACT: Immediately remove contaminated clothing and wash skin, hair and fingernails thoroughly with soap and water. Flush skin with running water for a minimum of 20 minutes. Obtain medical attention if irritation occurs.

INHALATION: Remove victim to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. If breathing is laboured, give oxygen. Obtain immediate medical attention.

INGESTION: If swallowed, immediately contact Syngenta, a poison control centre, doctor or nearest hospital for treatment advice. Provided the patient is conscious, wash out mouth with water. Do not give anything by mouth to an unconscious person. Do not induce vomiting unless directed by a physician or a poison control center. If spontaneous vomiting occurs, have victim lean forward with head down to avoid breathing in of vomitus, rinse mouth and administer water.
NOTES TO PHYSICIAN:
There is no specific antidote if this product is ingested. Treat symptomatically.
Skin contact paraesthesia effects (itching, tingling, burning or numbness) are transient, lasting up to 24 hours. Treat symptomatically.
Contains petroleum distillate — vomiting may cause aspiration pneumonia.

MEDICAL CONDITIONS KNOWN TO BE AGGRAVATED: None known.

SECTION 5: FIRE FIGHTING MEASURES

Flash point and method: >100 °C (Setash)
Upper and lower flammable (explosive) limits in air: Not applicable.
Auto-ignition temperature: Not available.
Flammability: Not applicable.
Hazardous combustion products: During a fire, irritating and possibly toxic gases may be generated by thermal decomposition or combustion.
Conditions under which flammability could occur: Keep fire exposed containers cool by spraying with water.
Extinguishing media: For small fires, use foam, carbon dioxide, dry powder or halon extinguisher. For large fires, use foam or water-fog; avoid use of water jet. Water spray may be ineffective as an extinguishing medium but may be used to cool fire-exposed containers and to flush non-ignited spills or vapours away from sources of ignition. Wear full protective clothing and self-contained breathing apparatus. Evacuate nonessential personnel from the area to prevent human exposure to fire, smoke, fumes or products of combustion. Prevent use of contaminated buildings, area, and equipment until decontaminated. Water runoff can cause environmental damage. Contain run-off water with, for example, temporary earth barriers.
Sensitivity to explosion by mechanical impact: None known.
Sensitivity to explosion by static discharge: None known.

SECTION 6: ACCIDENTAL RELEASE MEASURES

Personal Precautions: Make sure all personnel involved in the spill cleanup follow good industrial hygiene practices. A small spill can be handled routinely. Wear suitable protective clothing and eye protection to prevent skin and eye contact. Use adequate ventilation and wear an air-supplied respirator to prevent inhalation.
Procedures for dealing with release or spill: Control the spill at its source. Contain the spill to prevent from spreading or contaminating soil or from entering sewage and drainage systems or any body of water. Clean up spills immediately, observing precautions outlined in Sections 7 and 8. Pump or scoop large amounts of liquid into a disposable container. Absorb remaining liquid or smaller spills with clay, sand or vermiculite. Scoop or sweep up material and place into a disposal container. Wash area with detergent and water. Pick up wash liquid with additional absorbent and place into compatible disposal container. On soils, skim off the upper contaminated layer and collect for disposal. Once all material is cleaned up and placed in a disposal container, seal container and arrange for disposition. Spillages or uncontrolled discharges into watercourses must be alerted to the appropriate regulatory body.

SECTION 7: HANDLING AND STORAGE

Handling practices: KEEP OUT OF REACH OF CHILDREN and animals. Prevent eating, drinking, tobacco use, and cosmetic application in areas where there is a potential for exposure to the material. Avoid breathing vapours or spray mist. Wear full protective clothing and equipment (see Section 8). After work, rinse gloves and remove protective equipment, and wash hands thoroughly with soap and water after handling, and before eating, tobacco use, drinking, or using the toilet. Wash contaminated clothing before re-use and separate from household laundry. Keep containers closed when not in use. Keep product, wash or rinse water, and contaminated materials out of water, away from crops, and away from access by people, animals and birds.
Appropriate storage practices/requirements: Store in original container only in a well-ventilated, cool, dry, secure area. Protect from heat, sparks and flame. Do not expose sealed containers to temperatures above 40 °C. Keep separate from other products to prevent cross contamination. Rotate stock. Clean up spilled material immediately.

National Fire Code classification: Not required.

DEMAND® CS Insecticide
PAGE 3 OF 7
SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION

Applicable control measures, including engineering controls: This product is intended for use outdoors where engineering controls are not necessary. If necessary, ensure work areas have ventilation, containment, and procedures sufficient to maintain airborne levels below the TLV. Warehouses, production area, parking lots and waste holding facilities must have adequate containment to prevent environmental contamination. Provide separate shower and eating facilities.

THE FOLLOWING RECOMMENDATIONS FOR EXPOSURE CONTROLS/PERSONAL PROTECTION ARE INTENDED FOR THE MANUFACTURE, FORMULATION, PACKAGING AND USE OF THIS PRODUCT.

FOR COMMERCIAL APPLICATIONS AND/OR ON-FARM APPLICATIONS CONSULT THE PRODUCT LABEL.

Personal protective equipment for each exposure route:
General: Avoid breathing dust, vapours or aerosols. Avoid contact with eye, skin and clothing. Wash thoroughly after handling and before eating, drinking, or handling tobacco.

INGESTION: Do not eat, drink, handle tobacco, or apply cosmetics in areas where there is a potential for exposure to this material. Always wash thoroughly after handling.

EYES: Where eye contact is likely, use chemical splash goggles. Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower.

SKIN: Where contact is likely, wear chemical-resistant gloves (such as nitrile or butyl), coveralls, socks and chemical-resistant footwear. For overhead exposure, wear chemical-resistant headgear.

INHALATION: A respirator is not normally required when handling this substance. Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below exposure limits. A NIOSH-certified combination air-purifying respirator with an N, P or R 95 or HE class filter and an organic vapor cartridge may be permissible under certain circumstances where airborne concentrations are expected to exceed exposure limits. Protection provided by air-purifying respirators is limited. Use a pressure demand atmosphere-supplying respirator if there is any potential for uncontrolled release, exposure levels are not known, or under any other circumstances where air-purifying respirators may not provide adequate protection.

SECTION 9: PHYSICAL AND CHEMICAL PROPERTIES

Appearance: Off-white liquid.
Formulation Type: Emulsifiable concentrate.
Odour: Slight odour/typical aromatic solvent.
pH: 7.3 (1% w/w dilution in H2O).
Vapour pressure and reference temperature: 1.5 x 10^9 mmHg @ 20 °C (Lambda-Cyhalothrin technical).
Vapour density: No data.
Boiling point: 100 °C.
Freezing point: -16 °C.
Specific gravity or density: 1.04 @ 20 °C.
Evaporation Rate: Not available.
Water/oil partition coefficient: log Kow = 7 (Lambda-Cyhalothrin technical).
Odour threshold: Not available.
Viscosity: 320 cps.
Solubility in Water: 0.004 mg/L (Lambda-Cyhalothrin technical).

SECTION 10: STABILITY AND REACTIVITY

Chemical stability: Stable under normal use and storage conditions.
Conditions to avoid: None known.
Incompatibility with other materials: None known.
Hazardous decomposition products: Can decompose at high temperatures forming toxic gases.
Hazardous polymerization: Will not occur.

DEMAND® CS Insecticide
PAGE 4 OF 7
SECTION II: TOXICOLOGICAL INFORMATION

Acute Toxicity/Irritation Studies (Finished Product)

Ingestion: Practically Non-Toxic
Oral (LD50 Rat): > 5,000 mg/kg body weight

Dermal: Slightly Toxic
Dermal (LD50 Rat): > 2,000 mg/kg body weight

Inhalation: Practically Non-Toxic
Inhalation (LC50 Rat): > 4.62 mg/L air - 4 hours

Eye Contact: Mildly Irritating (Rabbit)

Skin Contact: Moderately Irritating (Rabbit)

Skin Sensitization: A Weak Sensitizer (Guinea Pig)

Other Toxicity Information
Ingestion may cause nausea, gastrointestinal upset and vomiting. Moderate irritant to rabbit skin. In humans contact with exposed skin may result in temporary itching, tingling, burning or numbness, called paresthesia. The effect may result from splash, aerosol, hot vapor contact or transfer to the face from contaminated gloves and hands. This effect is transient, lasting up to 24 hours. Face and genital areas are especially susceptible to this effect. There is no evidence of any long term or cumulative effects following repeated contamination. Repeated and/or prolonged contact may cause skin sensitization. High concentrations of vapour are irritating to the respiratory tract. Material is unlikely to produce vapour or mist in transportation and be hazardous by inhalation.

Reproductive/Developmental Effects
Lambda-Cyhalothrin:
Not a developmental or reproductive toxicant.

Chronic/Subchronic Toxicity Studies
Lambda-Cyhalothrin:
Reversible paresthesia (abnormal skin sensation).
Reversible clinical signs of neurotoxicity in mammals.

Carcinogenicity
Lambda-Cyhalothrin:
No treatment-related tumors in rats or mice.

Other effects of overexposure: Pyrethroids may produce non-specific symptoms such as nausea, vomiting, abdominal pain and diarrhea. Large doses may cause disturbance of the nervous system with tremors, ataxia, weakness of limbs, convulsions, coma, and death from respiratory depression. Dermal contact with pyrethroids in the facial area may cause a subjective sensation of tingling or numbness (paresthesia). There is no evidence of any long-term or cumulative effects on the skin.

Toxicity of Other Components
The acute toxicity test results reported in Section 11, above, for the finished product take into account any acute hazards related to the “other components” in the formulation.
Cumene (< 1%)
Exposure to cumene vapors may cause irritation to eyes, skin, and respiratory tract. Cumene may also cause headaches, dizziness, anesthesia, drowsiness, unconsciousness and other central nervous system effects. Prolonged exposure to high concentrations (>100 PPM) may result in liver, kidney or lung damage. Test results reported in Section 11 for the final product take into account any acute hazards related to the 1,2,4-trimethylbenzene in the formulation.
1,2,4-Trimethylbenzene (≤ 2.2 %)
Test results reported in Section 11 for the final product take into account any acute hazards related to the 1,2,4-trimethylbenzene in the formulation.

Phosphoric Acid (61.1%)
Test results reported in Section 11 for the final product take into account any acute hazards related to the presence of phosphoric acid in the formulation.

Propylene Glycol
Reported to cause central nervous system depression (anesthesia, dizziness, confusion), headache and nausea. Also, eye irritation may occur with lacrimation but no residual discomfort or injury. Prolonged contact to skin may cause mild to moderate irritation and possible allergic reactions. Chronic dietary exposure cause kidney and liver injury in experimental animals.

Petroleum Solvent
The supplier reports that high vapour/aerosol concentrations (> 1000 ppm) are irritating to the eyes and the respiratory tract, may cause headaches, dizziness, anesethesia, drowsiness, unconsciousness and other central nervous system effects. Test results reported in Section 11 for the final product take into account any acute hazards related to the xylene in the formulation.

Xylene (≤ 1 %)
Test results reported in Section 11 for the final product take into account any acute hazards related to the xylene in the formulation.

Target Organs
Active Ingredients
Lambda-Cyhalothrin Technical: Liver, central nervous system (CNS)

Inert Ingredients
1,2,4-Trimethylbenzene: CNS, liver, kidney, blood, respiratory tract, skin, eye
Propylene Glycol: CNS, skin, eye, kidney, liver.
Phosphoric Acid: Respiratory tract, skin
Cumene: CNS, respiratory tract, skin, eye, liver, kidney
Petroleum Solvent: CNS, eye, respiratory tract
Xylene: CNS, respiratory tract, skin

Other materials that show synergistic toxic effects together with the product: None known.

SECTION 12: ECOLOGICAL INFORMATION

Summary of Effects
DEMAND is a synthetic pyrethroid insecticide that is mixed with water and applied as a spray for the control of a broad spectrum of pests. The active ingredient, lambda-cyhalothrin, is slightly toxicity to birds, but is highly toxic to fish, aquatic invertebrates (water flea) and insects (bees).

Eco-Acute Toxicity
Lambda-Cyhalothrin Technical:
Bees 48 hr contact LC50/EC50 0.038 µg/bee
Invertebrates (Water Flea) 48 hr LC50/EC50 0.36 µg/L
Fish (Trout) LC50/EC50 (96 hr) 0.24 µg/L
Fish (Bluegill) LC50/EC50 (96 hr) 0.21 µg/L
Birds (8-day dietary - Bobwhite Quail) LC50/EC50 > 5,300 mg/kg
Birds (8-day dietary - Mallard Duck) LC50/EC50 > 3,792 mg/kg

Eco-Chronic Toxicity
Lambda-Cyhalothrin Technical:
Most sensitive species:
Daphnia 21 day NOEC 0.06 µg/L
Fathead Minnow 56 day NOEC 0.031 µg/L
Fathead Minnow MATC 0.044 µg/L
