**Exploiting the Potential Hyperspectral Remote  
Sensing at the Canada Centre for Remote Sensing**

### **ABSTRACT**

With continued international interest in spaceborne hyperspectral sensors for Earth Observations, high spectral data is becoming more readily available to the research and user community. With this increase in resolution comes the potential to exploit an information rich source of data, coupled with an increased level of required calibration precision to get to that information. The Canada Centre for Remote Sensing (CCRS) remains active in developing methods to improve data quality and to extract information products supporting the monitoring and management of our natural resources. This presentation will review some of the activities ongoing at CCRS in this area.

Refreshments will be served at 10:15 a.m. in 315 Petrie.

**DATE:** Tuesday, July 21, 2009  
**TIME:** 10:30 a.m. to 11:30 a.m.  
**LOCATION:** Room 317, Petrie Building
