

# Towards a typology of questions for requirements elicitation interviews

---

OLESYA ZAREMBA AND SOTIRIOS LIASKOS

YORK UNIVERSITY, CANADA

# Outline

---

## 1. Motivation

- why do we need to talk about interview questions?
- why do we need to introduce categories of interview questions?

## 2. Typology

- A glimpse of the categories developed so far.

## 3. Applications

- Examples of how we can use typology to qualitatively analyze interviews.

# Interviews

---

## Useful and widely used in RE

- For gathering initial background information for a project
- For understanding and resolving political issues [Hickey and Davis]

# Interviews

---

Useful and widely used in RE

- For gathering initial background information for a project
- For understanding and resolving political issues [Hickey and Davis].

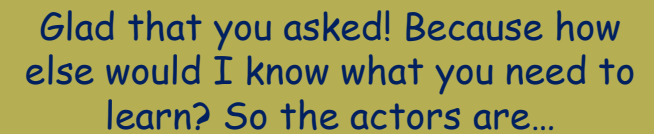

Typical Interview

- Interviewer asks questions
- Interviewee responds as they wish

Answer quality depends (also) on question quality

Who are the actors involved in this process and what do they do?

Glad that you asked! Because how else would I know what you need to learn? So the actors are...

# Motivation

---

What are good questions to ask?

- What to ask? [**Content**]
- When to ask it? [**Ordering**]
- How to ask it? [**Style**]

Forget *good* questions: how do we even just talk about questions?

- We need a **vocabulary**.

# Our work

---

An ongoing effort for developing such a set of interview question categories.

Based on a review of the literature in various domains where interviewing is relevant

Goal: develop a classification scheme (a **typology**) of interview questions.

- Why: assist empirical scientists with qualitatively analyzing interview data using a standard coding language.

Advantage of using a common scheme:

- Application of common reliability measures, such as inter-rater reliability.
- Straightforward reproducibility by other researchers.

# Methodology

---

## A broad literature review:

- Areas include: software engineering, psychology, sociology, knowledge management, library science, journalism, health care, and judicial and criminal investigation.
- Sources: IEEE, Proquest, Pubmed, and Factiva have been used.
- Queries:
  - “library science” and “reference interview”;
  - “sociology” and “interview question\*”
  - “psychology” and “interview question\*”.
- Snowballing

# So far: groups of categories

Content

Time

Form

Style and probing style

Objective

Also: Ordering

# Content

---

Concerned with what the interviewer is interested in finding out about when asking a question.

Object of inquiry and questions about it <sup>[Derr]</sup>

- Existence, identity, properties, relations etc.

Focus on identifying objects, processes and relationships thereof <sup>[Wood]</sup>

Theory informed, e.g.:

- activity theory <sup>[Fuentes-Fernández et al.]</sup>
- sociotechnical systems <sup>[Wahbeh et al.]</sup>
- viewpoints <sup>[Sommerville et a.]</sup>
- Modelling approach, e.g.:
  - goal oriented, object oriented, process oriented.

# Content
