

Maryanne Amacher
(1938-2009)

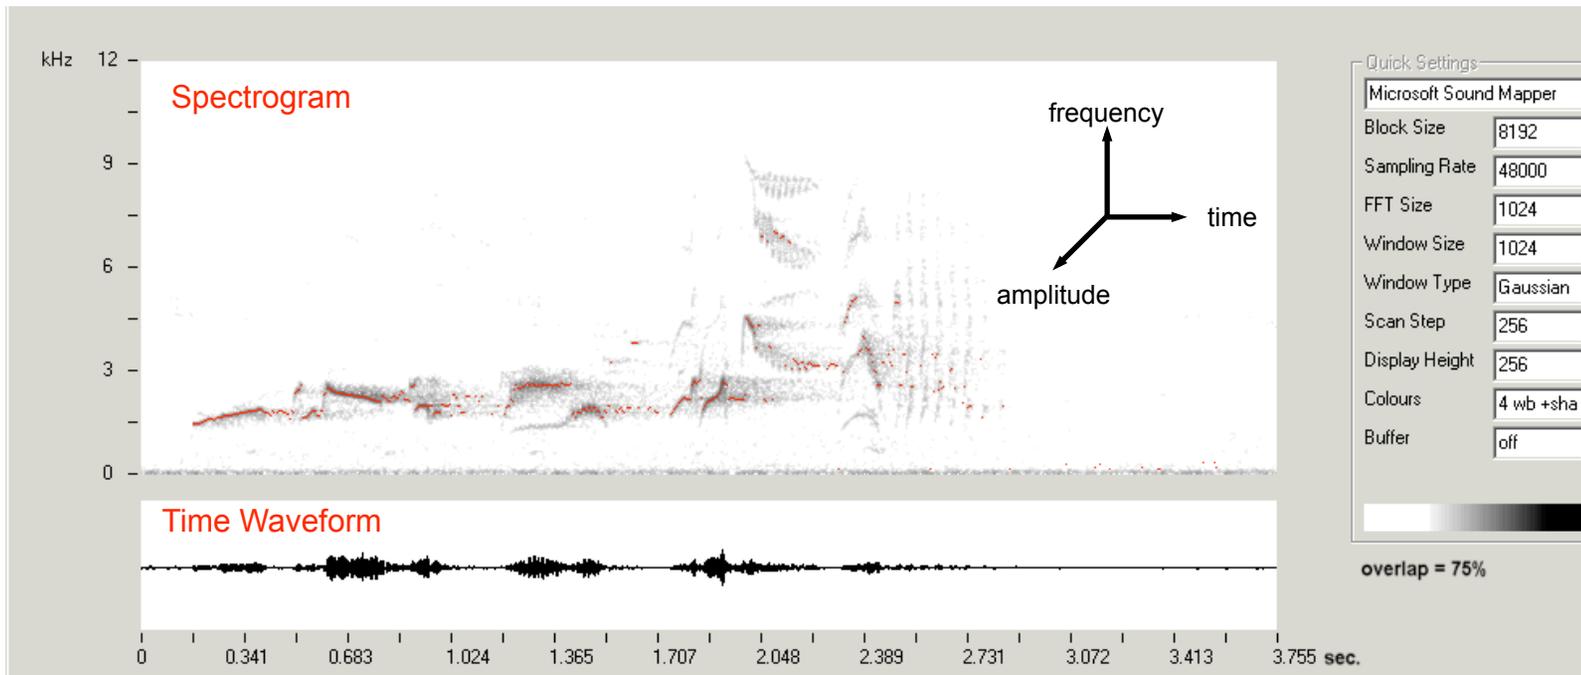

When played at the right sound level, which is quite high and exciting, the tones in this music will cause your ears to act as neurophonic instruments that emit sounds that will seem to be issuing directly from your head ... (my audiences) discover they are producing a tonal dimension of the music which interacts melodically, rhythmically, and spatially with the tones in the room. Tones 'dance' in the immediate space of their body, around them like a sonic wrap, cascade inside ears, and out to space in front of their eyes ... Do not be alarmed! Your ears are not behaving strange or being damaged! ... these virtual tones are a natural and very real physical aspect of auditory perception, similar to the fusing of two images resulting in a third three dimensional image in binocular perception ... I want to release this music which is produced by the listener ...

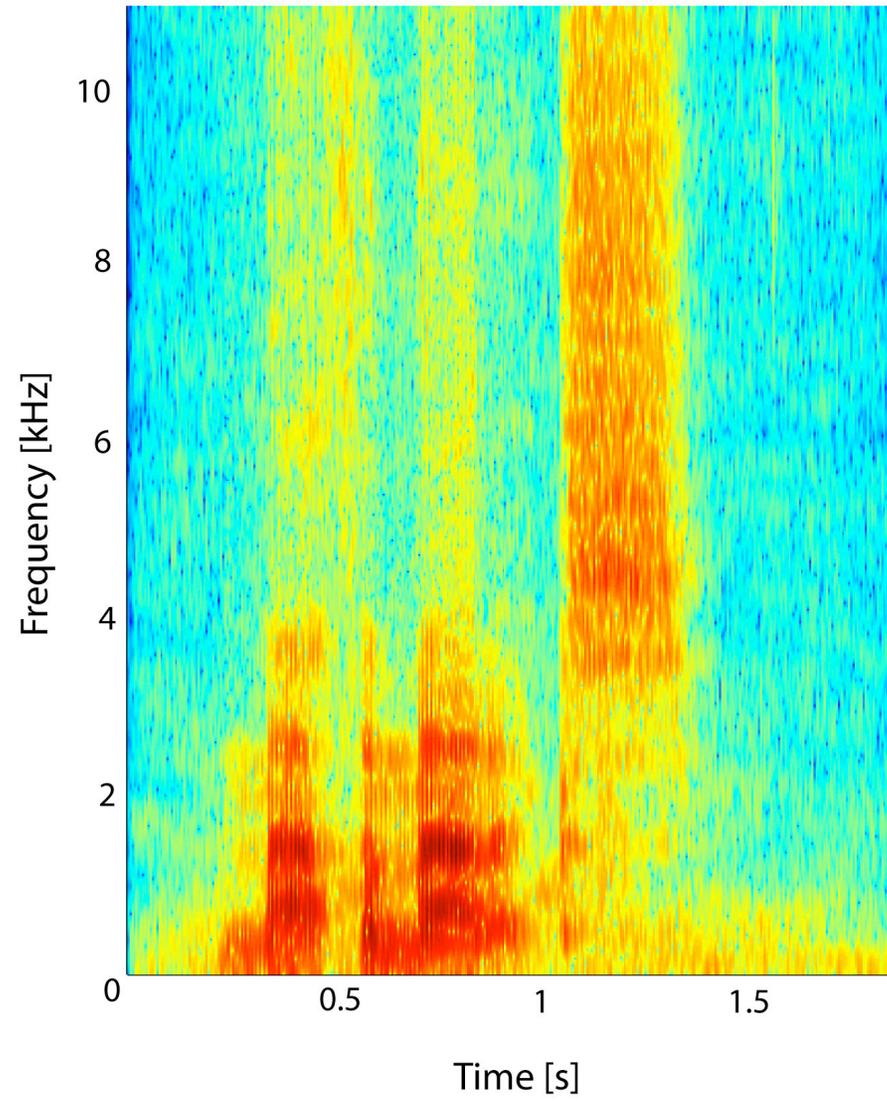

- Maryanne Amacher

When played at the right sound level, which is quite high and exciting, the tones in *this music will cause your ears to act as neurophonic instruments that emit sounds that will seem to be issuing directly from your head ...* (my audiences) discover they are producing a tonal dimension of the music which interacts melodically, rhythmically, and spatially with the tones in the room. Tones 'dance' in the immediate space of their body, around them like a sonic wrap, cascade inside ears, and out to space in front of their eyes ... Do not be alarmed! Your ears are not behaving strange or being damaged! ... these virtual tones are a natural and very real physical aspect of auditory perception, similar to the fusing of two images resulting in a third three dimensional image in binocular perception ... *I want to release this music which is produced by the listener ...*

Spectral Domain

*Tone-like sounds
spontaneously emitted
by the ear*

Why might the ear emit sound?

⇒ An Issue of Scale

NOTE: different vertical scales! (one is logarithmic)

$$\text{dB SPL} = 20 \log_{10} \left(\frac{\text{Pa}}{20 \times 10^{-6}} \right)$$

Decibels (dB)

0 dB = x1
10 dB ≈ x3
20 dB = x10
40 dB = x100
60 dB = x1000
80 dB = x10000
100 dB = x100000
...

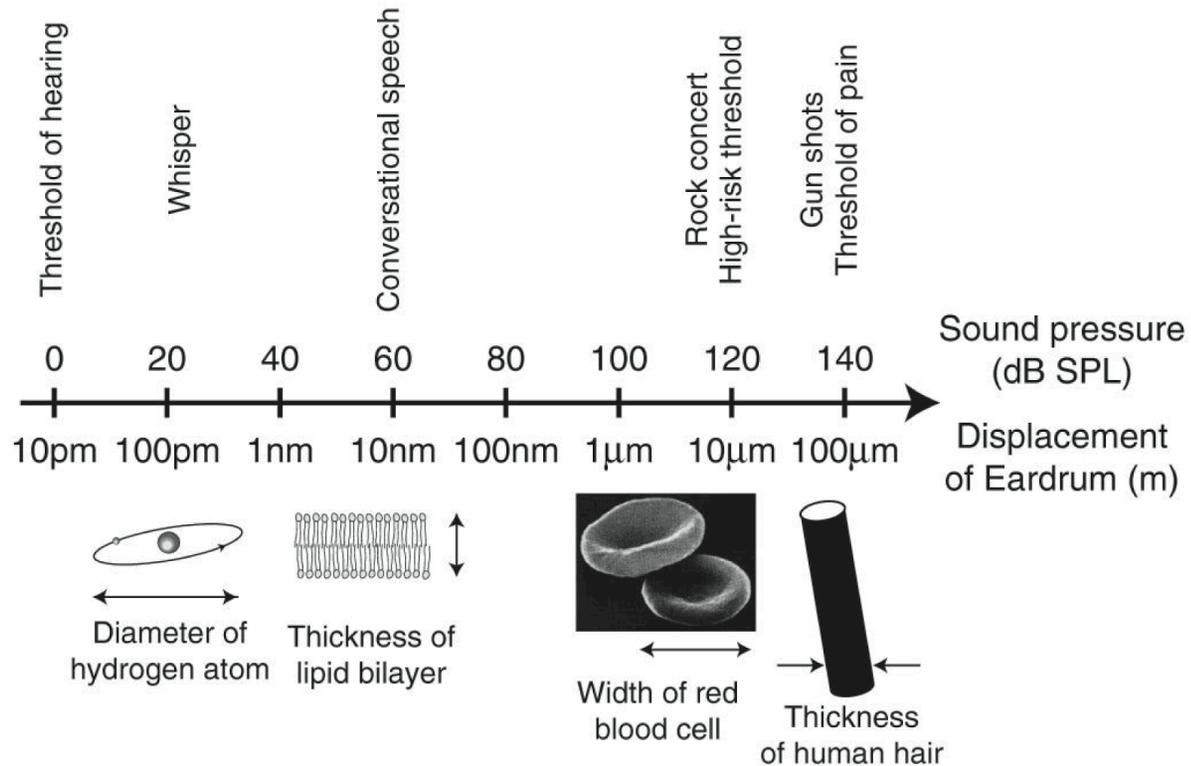

⇒ a dB value is a comparison of two numbers

$$\text{dB} = 20 \log(x/y)$$

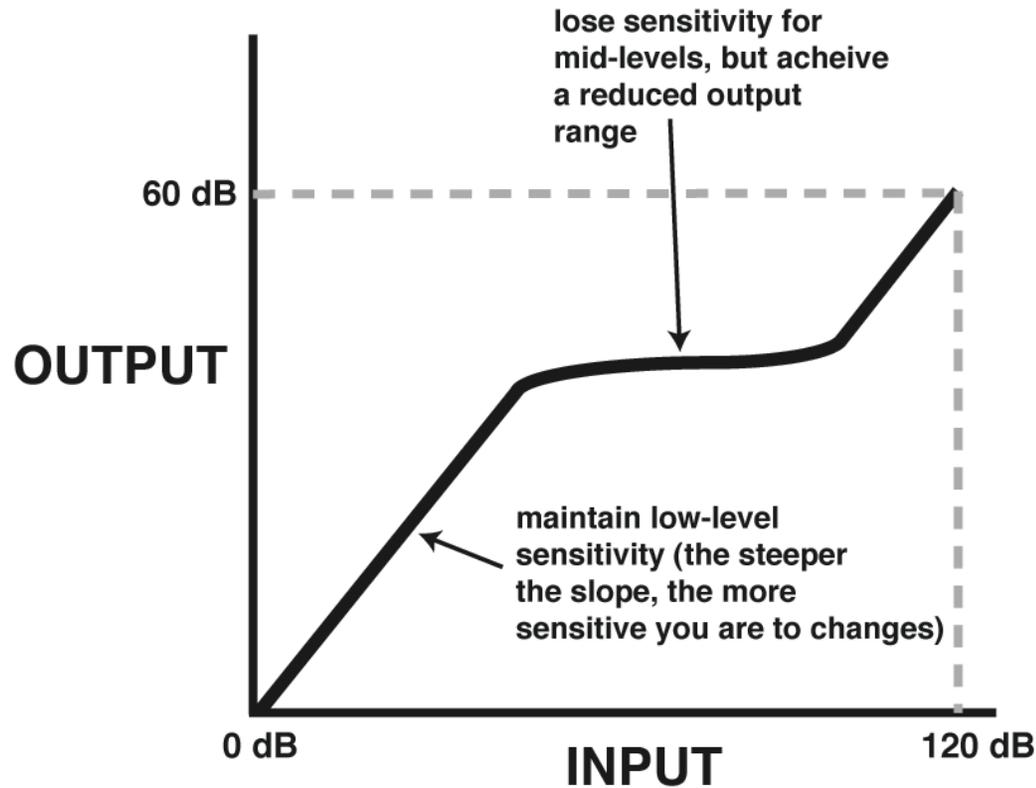

⇒ Why use a dB scale?

Dynamic Range

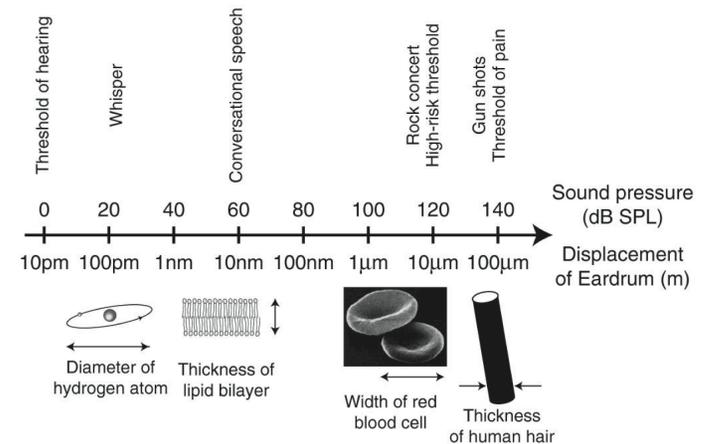

Humans hear over a pressure range of 120 dB [that's a factor of a million]

Compression & Amplification

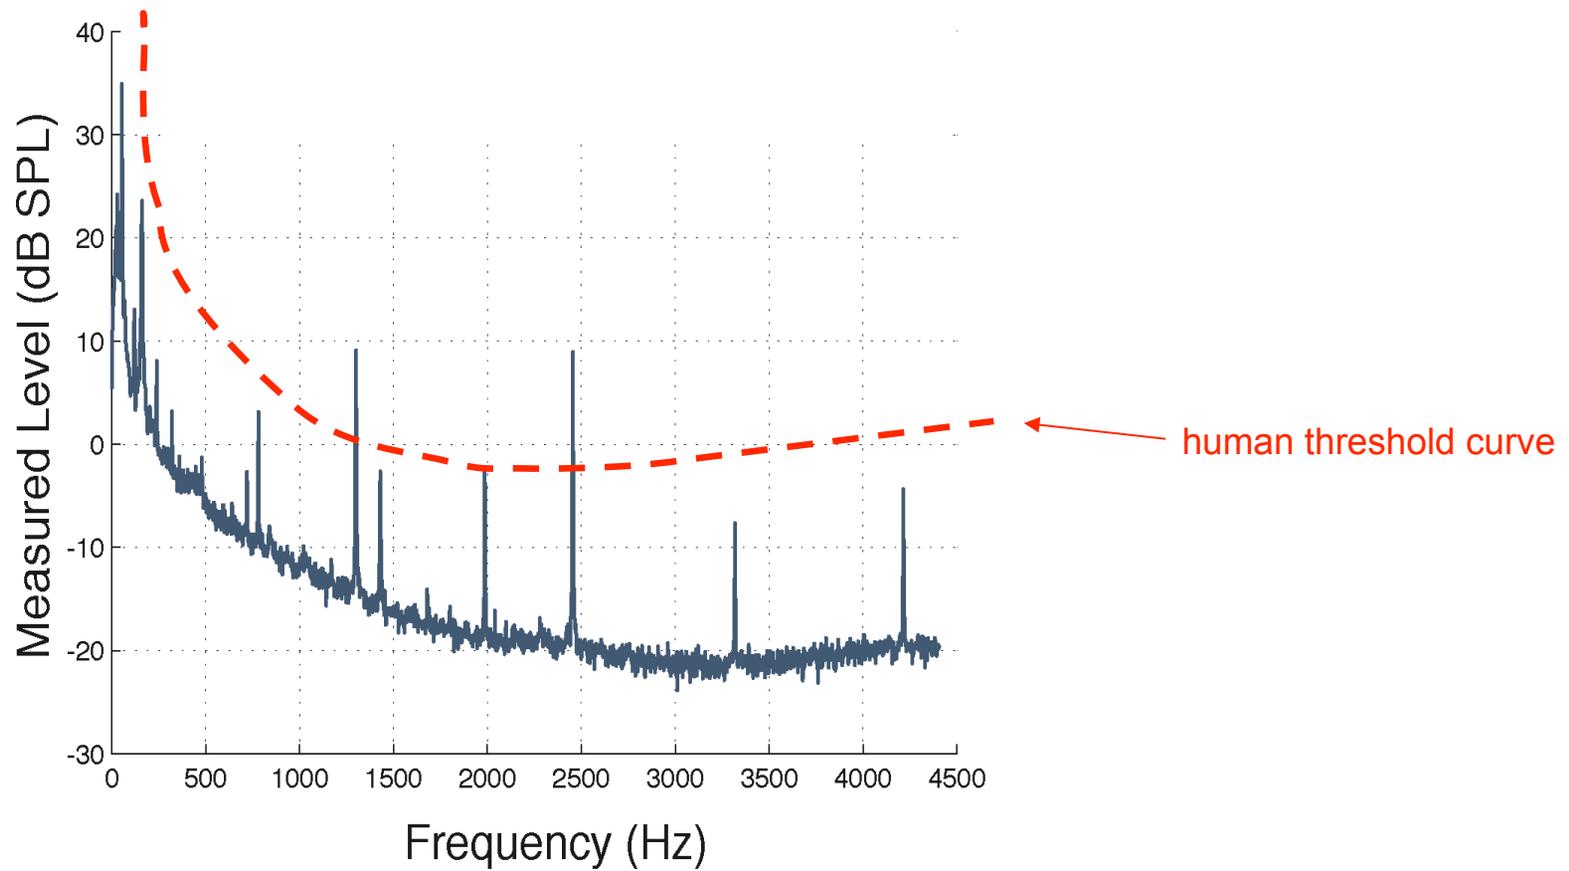

- Central nervous system can only encode incoming information over a limited range (**COMPRESSION**)
- Ideally want to maintain sensitivity at low levels (**AMPLIFICATION**)

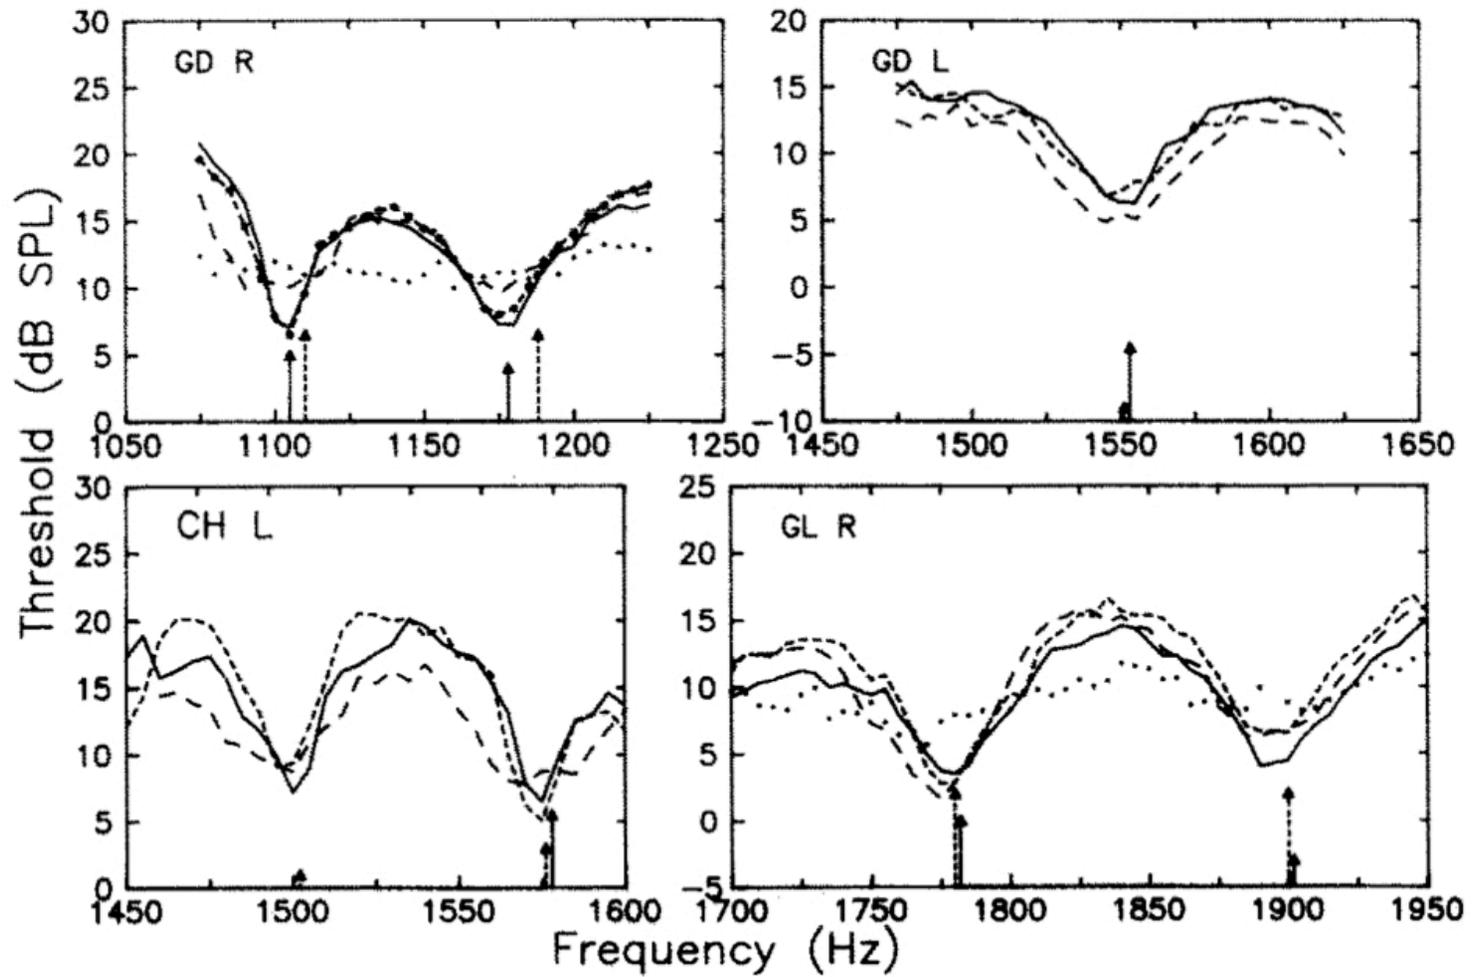

When played at the right sound level, *which is quite high and exciting*, the tones in this music will cause your ears to act as neurophonic instruments that emit sounds that will seem to be issuing directly from your head ... (my audiences) discover they are producing a tonal dimension of the music which interacts melodically, rhythmically, and spatially with the tones in the room. Tones 'dance' in the immediate space of their body, around them like a sonic wrap, cascade inside ears, and out to space in front of their eyes ... Do not be alarmed! Your ears are *not behaving strange or being damaged!* ... these virtual tones are a natural and very real physical aspect of auditory perception, similar to the fusing of two images resulting in a third three dimensional image in binocular perception ... I want to release this music which is produced by the listener ...

SOAEs & Threshold

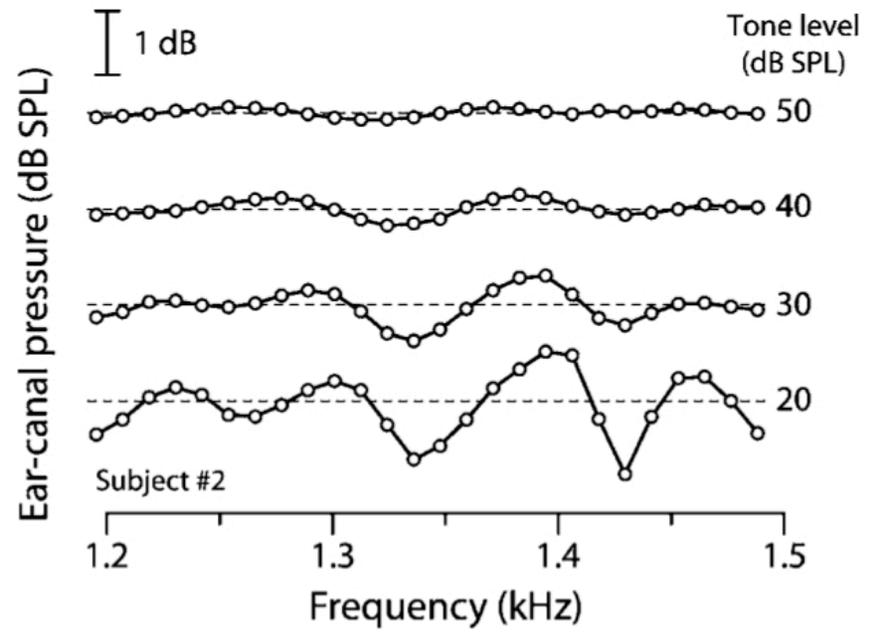

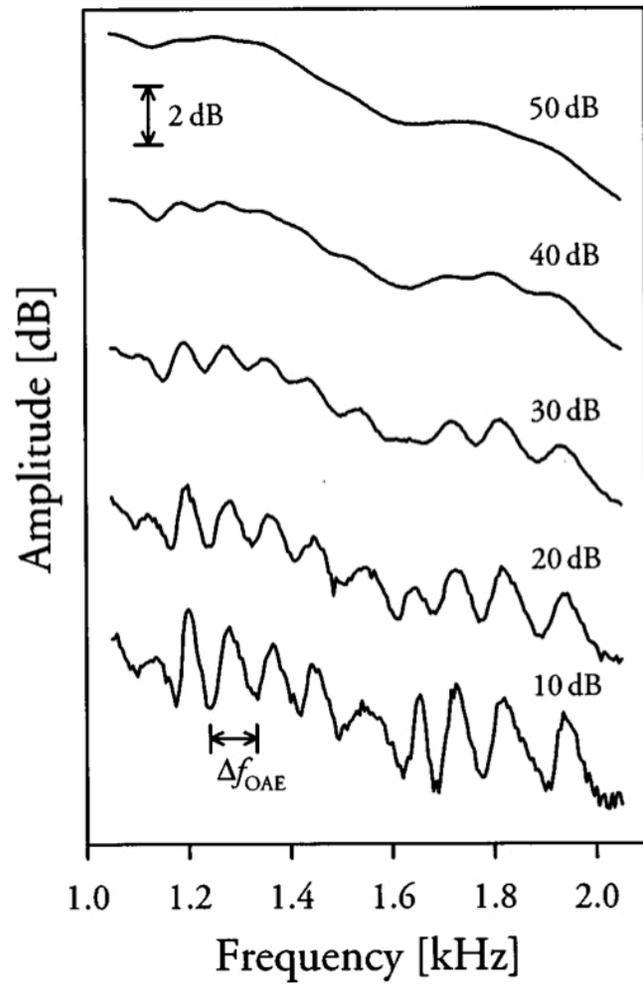

⇒ SOAEs byproduct of an *amplification* mechanism?

SOAEs & Threshold

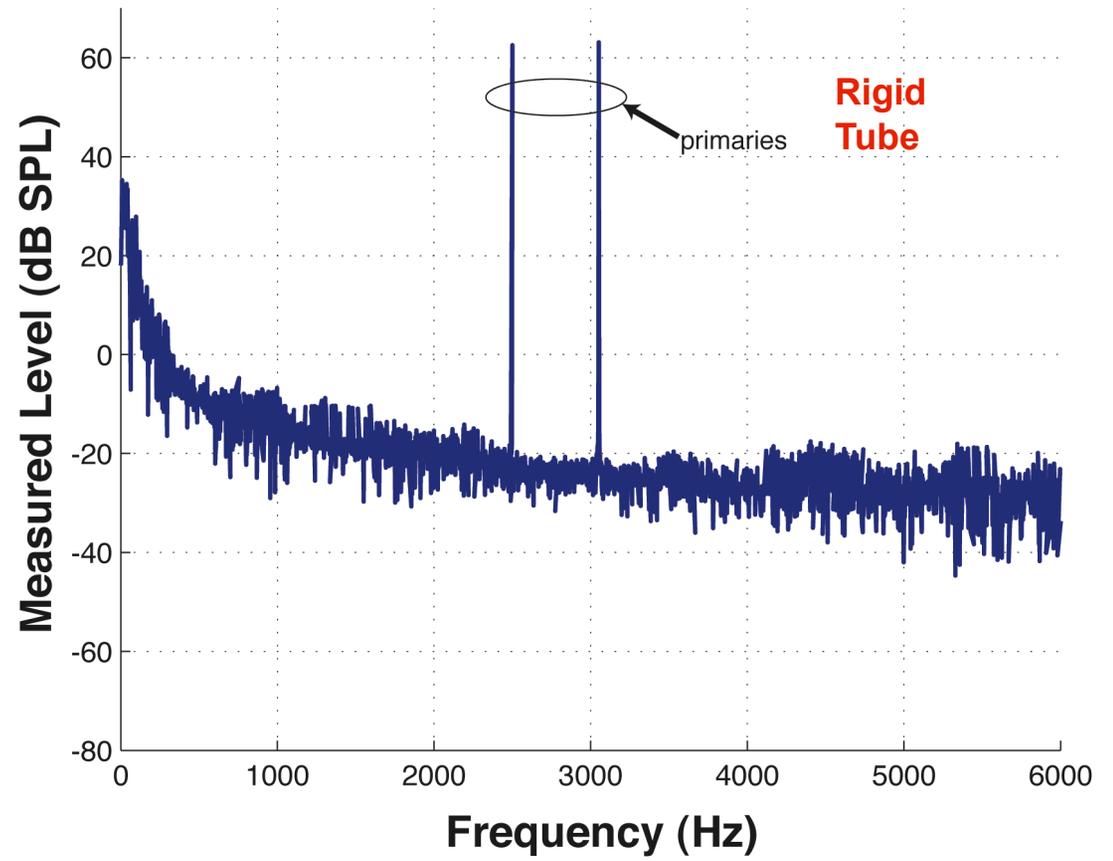

OAEs Interact w/ External Tones

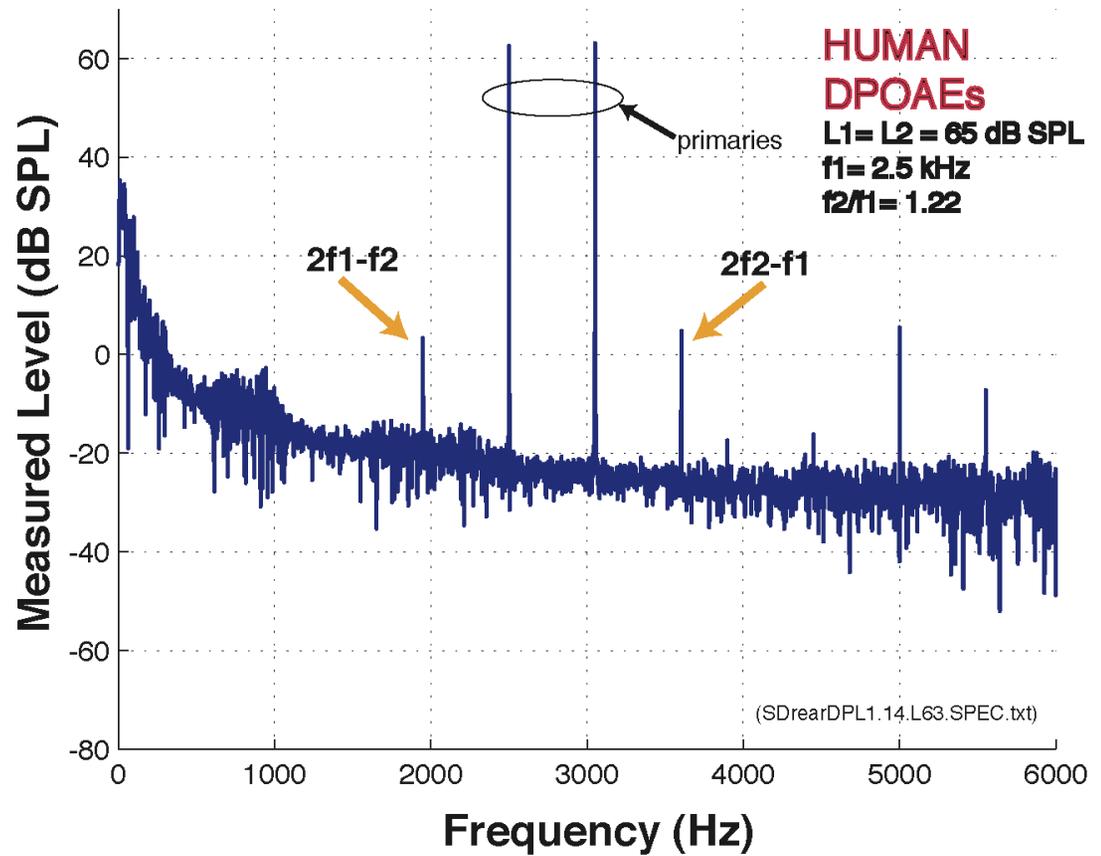

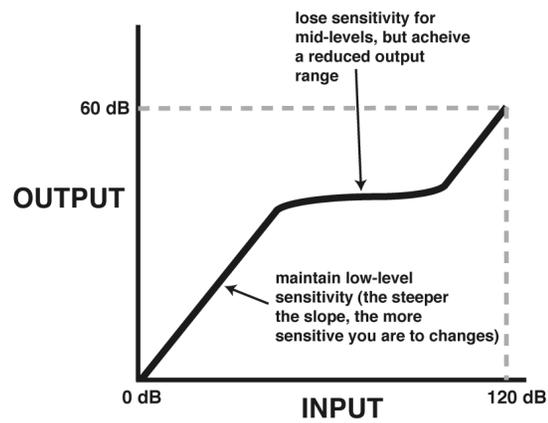

When played at the right sound level, which is quite high and exciting, the tones in this music will cause your ears to act as neurophonic instruments that emit sounds that will seem to be issuing directly from your head ... (my audiences) discover they are producing a tonal dimension of the music which interacts melodically, rhythmically, and spatially with the tones in the room. Simple Model to Explain OAEs?

⇒ Wave motion sets basis for *reflection* of energy

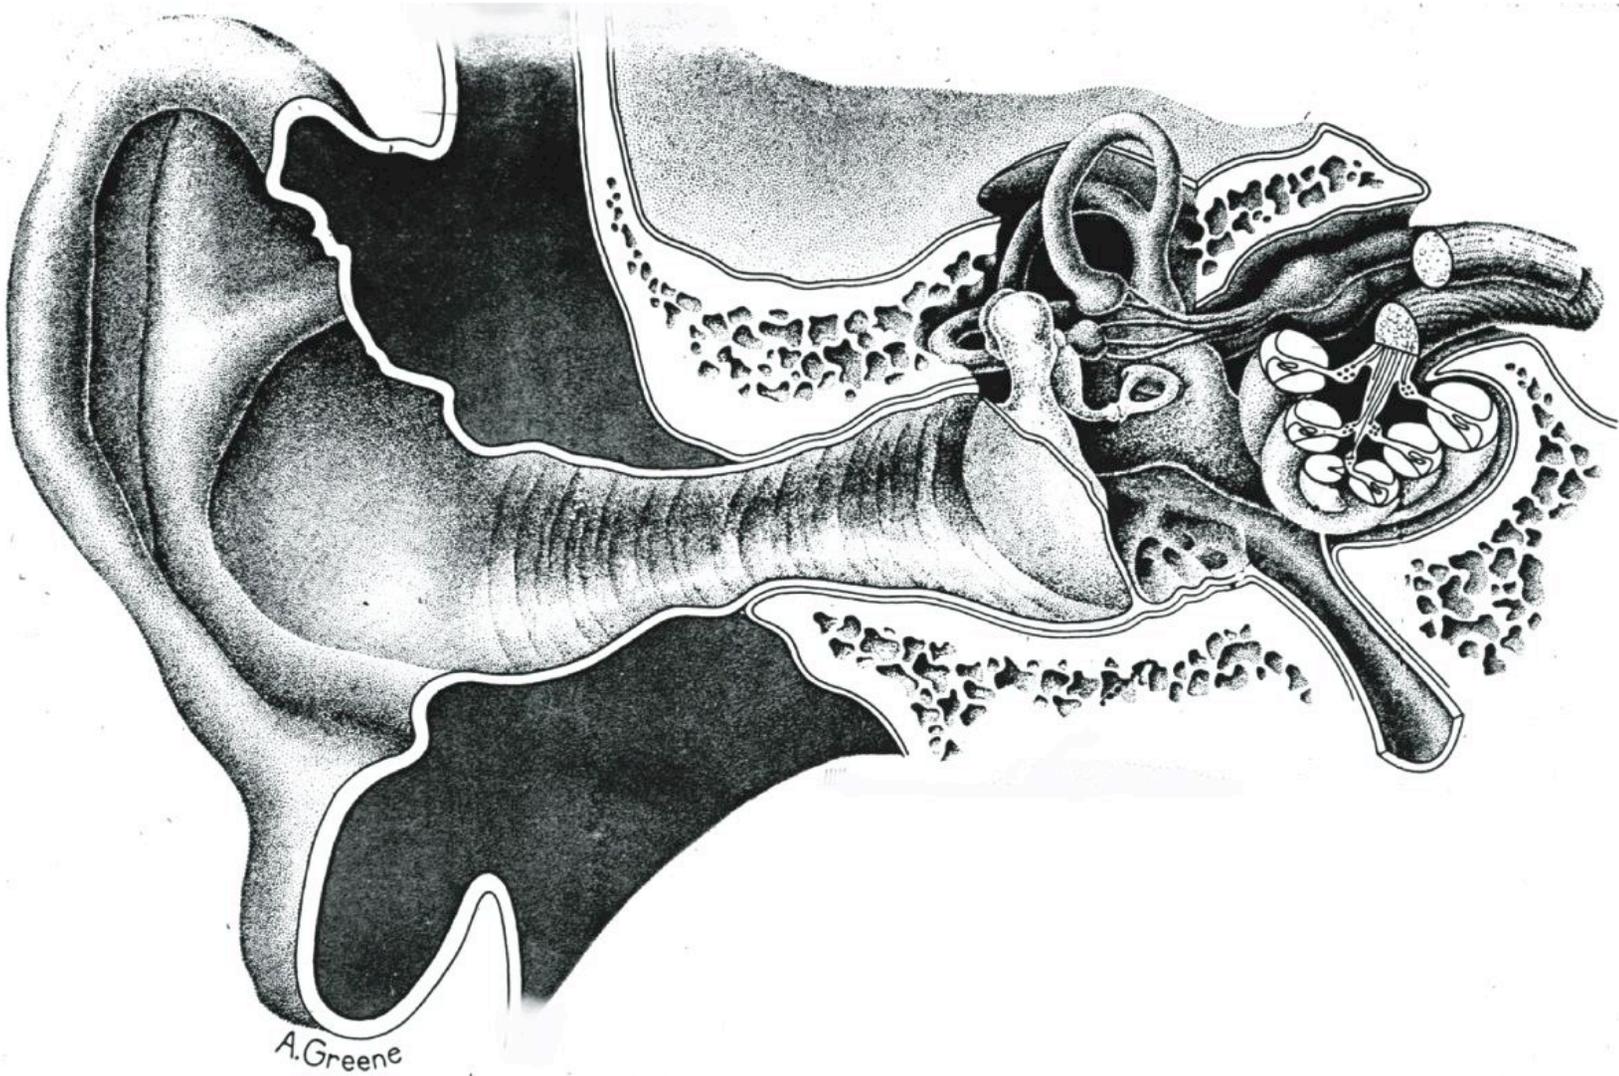

Sources of Reverse-Traveling Waves

Idea: SOAEs arise due to standing-waves set up along the length of the cochlea, *analogous to a laser cavity*

When played at the right sound level, which is quite high and exciting, the tones in this music will cause *your ears* to act as neurophonic instruments that emit sounds that will seem to be issuing directly from your head ... (my audiences) discover they are producing a tonal dimension of the music which interacts melodically, rhythmically, and spatially with the tones in the room. Tones 'dance' in the immediate space of their body, around them like a sonic wrap, cascade inside ears, and out to space in front of their eyes ...
