PSYC 3032M 3.0: INTERMEDIATE STATISTICS II

Course Prerequisite(s): Course prerequisites are strictly enforced

- HH/PSYC 1010 6.0 (Introduction to Psychology)
- HH/PSYC 2020 6.0 (Statistical Methods I and II) or substitute (e.g., HH/PSYC 2021 3.0 & HH/PSYC 2022 3.0)
- HH/PSYC 2030 3.0 (Introduction to Research Methods)
- HH/PSYC 3031 3.0 (Intermediate Statistics I)
- Completed at least 54 earned credits

Course Credit Exclusions

Please refer to [York Courses Website](#) for a listing of any course credit exclusions.

Course Description

This course provides students with the opportunity to apply, consolidate, and extend their statistical analysis skills to realistic psychological data for independent groups designs, repeated measures designs and correlational designs. Effect sizes and hypothesis testing will be covered for all types of hypotheses, including mean differences, interactions among discrete and/or continuous variables, correlation/regression, multiple regression, etc. An important component of the course is the use of the statistical software package R for all analyses.

Course Format

This course will be delivered in a blended format (a combination of in-class and asynchronous learning). Online materials, activities, etc., will be available to students throughout the course, while in-class time will be reduced and used to support and reinforce learning, demonstrate the material through examples and exercises.

Course Learning Outcomes

- Students will be able to define hypotheses, and distinguish between types of variables (predictors, outcomes, mediators, moderators, etc.).
- Students will be able to identify and conduct the appropriate analysis(es) for intermediate level research question(s)/hypothesis(es), including multiple predictor models, moderation, and mediation.
- Students will be able to compare/contrast the distinct roles of hypothesis testing, effect sizes and confidence intervals.

- Students will be able to describe the limitations of the statistical analyses chosen.
- Students will be able to conduct and interpret the appropriate data analysis using statistical software such as R.
- Students will be able to interpret and communicate their results in APA format.

Specific Learning Objectives

- Expose students to different types of research designs in psychology
- Explain and critique existing methodologies
- Provide students the opportunity to analyse psychological data using intermediate-level statistics (i.e., methods beyond those learned in previous courses, but not at the level of a graduate course)
- Expose students to the use of data analytic software for analysis of psychological data
- Provide students the opportunity to think critically about applications of psychological findings
- Provide students the opportunity to interpret and communicate results effectively

Course Requirements and Assessment:

Assessment	Weighting
Assignments (4x)	50%
Exercises and Quizzes	15%
Participation	5%
Midterm	30%
Total	100%

Assignments: The assignments will provide students with the opportunity to apply the statistical concepts to realistic psychological data. Students will use statistical software to manage, explore and analyse their data. It is expected that you complete these activities individually, though some discussion about the subject matter between students is generally reasonable.

Midterm: The midterm exam will evaluate learning of the theoretical and practical aspects of the course. For example, in what situations to apply specific approaches, what issues may affect the validity of the analyses conducted, what alternative approaches are available when there are issues with the data (e.g., assumption violations). Interpretation of software output will also be included.

Exercises and Quizzes: Throughout the course, we will be construct R scripts to analyze data that is related to the theoretical components of the lectures. Students are expected to attempt the exercise files distributed in class, and submit HTML rendered version of these exercises. Each exercises will be evaluated using a pass-fail rubric. As well, quizzes will be made uploaded to eClass to evaluate student progress on the lecture material, and will also be evaluated using a pass-fail rubric.

Course Schedule

<i>Date</i>	<i>Topic</i>	<i>Assignment</i>	<i>Readings</i>
Jan 9	Course Introduction Review of R and Rstudio		1.2 2 (Optional)
Jan 16	Review of Descriptive and Inferential Statistics Graphics in R	A1 (5%)	3.1-3.6 3.2 (Optional)
Jan 23	Introduction to Correlation Introduction to Simple Linear Regression		3.7 4.1-4.2
Jan 30	Properties of Regression Models		4.3-4.4, 7.1 5.1-5.2
Feb 6	Multiple Regression Model (part 1)	A2 (10%)	6.2-6.3
Feb 13	Multiple Regression Model (part 2)		7.1-7.3
Feb 20	<i>READING WEEK</i>		
Feb 27	<i>Midterm</i>		
Mar 6	Assumptions and Model Dignostics		4.4,5.4,6.4
Mar 13	Categorical Predictor Variables	A3 (15%)	5.3
Mar 20	Mixing Qualitative and Quantitative Predictors (part 1)		7.3
Mar 27	Mixing Qualitative and Quantitative Predictors (part 2)		
April 3	Path Analysis	A4 (20%)	SEM (Optional)

The schedule above is in the nature of a *prediction*, and is not a guarantee or contract.

Grading as per Senate Policy

The grading scheme for the course conforms to the 9-point grading system used in undergraduate programs at York (e.g., A+ = 9, A = 8, B+ = 7, C+ = 5, etc.).

For a full description of York grading system see the York University Undergraduate Calendar

Deadlines for dropping the course: See here for further dates and information

<https://registrar.yorku.ca/enrol/dates/2023-2024/fall-winter>

POLICY ON MISSED ASSIGNMENTS

1. Students are expected to submit each assignment *prior to the beginning of the specified lecture*. Late assignments will not be accepted. **If you miss an assignment for no documented reason(s), you will receive a grade of zero.** Note that “my dog at my homework” or “my computer crashed and I lost my entire assignment” are not valid reasons for missing an assignment deadline; if you are not already, always backup your important day-to-day working files up by using some (hopefully free) cloud storage utility on your computer(s), such as Dropbox, OneDrive, Google Drive, iCloud, etc.

2. **Within 48 hours of a missed assignment, students must contact the course instructor via email, and documentation must be provided within one week.** In this email, please (a) outline the reason for your absence, and (b) confirm that you have medical or other relevant documentation to support this reason. Be sure to note your course section and your full name and student number in the subject of your email.

3. Once you have contacted the course instructor, you will need to submit an attending physician’s statement. This should be brought to your instructor’s mailbox or, in extreme cases, scanned and emailed.

Academic Integrity: All students are expected to abide by the university’s policies on academic integrity. The relevant documents can be found here:

<http://www.yorku.ca/academicintegrity/students/index.htm>. Although not limited to the

following four, any student found (1) looking at another student’s examination; (2) communicating with another student during the examination; (3) in possession of unauthorized documents (e.g., notes) in the examination; or, (4) receiving unauthorized communications from outside the examination room will be considered to be in violation of one or more of the university’s academic integrity policies and appropriate disciplinary steps will be taken.

Academic Accommodation for Students with Disabilities

While all individuals are expected to satisfy the requirements of their program of study and to aspire to do so at a level of excellence, the university recognizes that persons with disabilities may require reasonable accommodation to enable them to do so. The university encourages students with disabilities to register with ***Student Accessibility Services (SAS)*** to discuss their accommodation needs as early as possible in the term to establish the recommended academic accommodations that will be communicated to Course Directors as necessary. **Please let me know as early as possible in the term if you anticipate requiring academic accommodation so that we can discuss how to consider your accommodation needs within the context of this course.** Sufficient notice is needed so that reasonable steps for accommodation can be discussed. Accommodations for tests/exams normally require three (3) weeks (21 days) before the scheduled test/exam to arrange. <https://accessibility.students.yorku.ca/>

Excerpt from Senate Policy on Academic Accommodation for Students with Disabilities:

1. Pursuant to its commitment to sustaining an inclusive, equitable community in which all members are treated with respect and dignity, and consistent with applicable accessibility legislation, York University shall make reasonable and appropriate accommodations in order to promote the ability of students with disabilities to fulfill the academic requirements of their programs. This policy aims to eliminate systemic barriers to participation in academic activities by students with disabilities.

All students are expected to satisfy the essential learning outcomes of courses. Accommodations shall be consistent with, support and preserve the academic integrity of the curriculum and the academic standards of courses and programs. For further information please refer to: [York University Academic Accommodation for Students with Disabilities Policy](#).

Religious Accommodation. Appropriate accommodation will be made in accordance with the policies of the university. Please see the instructor at your earliest opportunity if you discover issues relating to your religious practices and the expectations of the course.
