Course Description

This course reviews a selection of the currently best-known psychotherapeutic approaches. It examines these approaches in terms of their views on: (a) human nature, (b) the composition of the psychotherapeutic problem, and (c) the overall strategy used to resolve the problem.

The grading scheme of this course aims to create an opportunity for deeper study, thus the class work is distributed throughout the course. There is an assignment for every class, regular journal entries, 2 exams, and a paper.

Course Objectives

Students are expected to gain:

- A familiarity with the currently best-known approaches in the field of counselling and psychotherapy.
- Insight into the different perspectives on human nature that underlie the different approaches.
- Understanding of the connection between the psychotherapeutic intervention strategies and the psychotherapeutic philosophy and goals that shape them.
- An appreciation of the role of the practitioner as conceptualized by each approach.
