

# Autism Diagnostic Interview-Revised (ADI-R) Clinical Training – June 4-7, 2024

The ADI-R is a semi-structured, standardized measure of communication, social interaction, play, and restricted and repetitive behaviours synonymous with autism spectrum disorder (ASD). It is widely considered a 'gold standard' measure for gathering important developmental and behavioural information for assessment and diagnosis of ASD. Developed by some of the foremost researchers and clinicians, the ADI-R provides a highly accurate evaluation of current and past behaviour in individuals from 12 months of age to adulthood, from individuals who are nonverbal to individuals who are verbally fluent. By completing the standardized interview with an informed caregiver, you can obtain information that informs diagnosis, treatment planning, and educational placement.

## THROUGH COMPLETION OF THIS INTRODUCTORY COURSE, YOU WILL...

- ✓ Learn how to administer the semi-structured clinical interview.
- ✓ Learn how to code the specific items within the measure.
- ✓ Observe administration and coding of the measure.
- ✓ Obtain experience with administration that will support your future use of measure as you work towards independent clinical use.
- ✓ Learn the differences between clinical and research use of the ADI-R.

## YOUR INVOLVEMENT

- Attend the training session
- Read and bring your own ADI-R manual (available through WPS; ADI-R protocols and a training package will be provided)
- Be prepared to observe administrations with volunteer parents of individuals with ASD
- Be prepared to discuss behaviours observed during the administrations and the coding for each administration with the group

### Program Dates:

Tuesday, June 4: 11:00 – 3:00 EST  
Wednesday, June 5: 11:00 – 3:00 EST  
Thursday, June 6: 11:00 – 3:00 EST  
Friday, June 7: 9:00 – 5:00 EST

### Location:

Zoom

### Cost:

ADI-R Training: \$999.00 CDN (\$899.00 for FT Grad Students/York Staff)

## DETAILS AND CONTACT

### Location: Videoconference format

This training session will be instructed by Dr. Adam McCrimmon, R.Psych. Dr. McCrimmon is an Associate Professor at the University of Calgary and the Director of the Autism Spectrum Education, Research, and Training (ASERT) lab. He is a certified Independent Trainer for the ADI-R.

**Please note: The ADI-R is a protected measure. This training opportunity can only be accessed by members of regulated health professions who are involved in the diagnosis of autism, or students working towards such registration.**

Interested professionals who would like to register for the training can complete the registration form. If you have questions about the training or your eligibility to participate in this training opportunity please contact us by
