CRITICAL REFLECTION
WHAT IT IS AND HOW TO USE IT

WHAT IS IT?

Critical reflection is the process of assessing past learning, examining our ideas, and creating meaning to inform future action. Although there are many frameworks that define and describe critical reflection, it is most often used in the classroom as a way to facilitate activities and/or assignments that ask students to engage with questions related to:

- **What?** (Describing what happened; What occurred and the students’ role in the experience)
- **So What?** (Exploring reactions to experience based on personal beliefs/assumptions and emerging understanding of course material)
- **Now What?** (Discovering new meaning & impact; Considering how the experience and lessons learned could inform the future) (Rolfe, Freshwater, & Jasper, 2001).

Engaging in critical reflection is both a skill that can be learned & assessed as well as a teaching strategy to inspire meaningful, personalized engagement with course content. It can also be a way to ‘close the loop’ on an experience where students are engaged with scenarios that mirror challenges and situations they may encounter in their future careers.

Feedback is integral to critical reflection. As Margaret Heritage argues in *Formative Assessment: Making It Happen in the Classroom* (2010), feedback helps students “identify the gap between where their learning currently stands, and assist[s] them to move forward to close the gap and achieve the desired goals.” (81) This feedback loop is illustrated above, with feedback being an ongoing process with interventions from Teacher Assessment, Self-Assessment, and Peer Assessment, until students have “closed the gap” and reached their learning goals.

WHY IS THIS IMPORTANT?

Incorporating critical reflection into course design offers an opportunity for students to look back on an experience (often one facilitated by the instructor and/or as part of the course), discover meaningful connections & insights from that experience, and consider how they might apply their learning in future
situations (in the course and/or beyond). Students have many experiences during their university career but may not often seek or have the time to consider how these experiences connect to their personal experiences, the course material, and/or their future ambitions. Instructors must consider how they can facilitate opportunities for students to articulate and showcase their learning. These reflective activities are also great opportunities for students to develop skills in critical thinking, communication, and giving and receiving feedback. Additionally, activities around critical reflection can also be an important opportunity to solicit, engage with, and make use of formative feedback from your students as part of the learning process. Insights from students’ reflections can act as a check for understanding of key course concepts and a way to gauge how and if students are engaged with different elements of the course.

HOW CAN INSTRUCTORS INCORPORATE REFLECTION IN THEIR TEACHING?

Instructors who want to incorporate critical reflection in their courses should consider the following:

1. **Be clear.** Critical reflection is a skill that students may not be familiar with. Providing students with examples, clear instructions, specific prompt questions, and any other resources to help them move through the different stages of reflection can help students get the most out of reflection activities.

2. **Make sure reflective activities are a dialogue rather than a monologue.** Learning can be particularly impactful when students can learn from their instructor and each other. Consider ways that students can share their reflections and engage with feedback, opinions, and ideas.

3. **Provide feedback on both the process and the product.** Knowing that reflection is a skill as well as a teaching strategy, consider how students can benefit from feedback on developing the skill of reflecting critically on an experience while also receiving feedback on their final reflection. Remember – feedback doesn’t always mean a mark or grade! Formative feedback can help students know if they’re on the right track and can provide the instructor with meaningful insight into how students are learning from and in a variety of experiences.

4. **Consider multiple ways for students to share their reflections.** While many reflective activities can be done by writing (e.g. reflective essays), students can reflect and express themselves best through a variety of means. Where applicable and feasible, consider offering students the opportunity to share their reflections verbally (live or via video recording), using images (drawings or photographs), or using other tools that don’t rely solely on the written word.

5. **Make connections with larger module, course, or degree outcomes.** Be transparent and explicit in how reflection activities tie into students’ ongoing learning.
