SPEAKER

Dr. Devin Phillips is an assistant professor of applied cardiorespiratory physiology in the School of Kinesiology and Health Sciences at York University. He completed his graduate work at the Faculty of Kinesiology, Sport and Recreation at the University of Alberta, followed by a postdoctoral fellowship at the Department of Medicine at Queen’s University. Dr. Phillips research program at York University focuses on health aging and biological sex-differences and their interrelationships with cardiorespiratory function, perceived breathlessness, and exercise performance. Additionally, his research evaluates the feasibility and efficacy of novel treatments that can be used in conjunction with exercise training to reduce breathlessness and improve cardiorespiratory function, exercise performance, and quality of life, in adults living with cardiorespiratory disease.
